LOADING THE DATASET

Team ID	PNT2022TMID04990
Project Name	Global Sales Data Analytics

- Before you can build a view and analyse your data, you must first connect the data to IBM Cognos analytics.
- Cognos supports connecting to a wide variety of data, stored in a variety of places.
- The data might be stored on your computer in a spreadsheet or a text file, or in a big data, relational, or cube (multidimensional) database on a server in your enterprise.
- In our case, we will be using a spreadsheet or text file for making our analysis.
